

What is ADEPT Suite

It's a high performance data stream transformation tool with the ability to extract data during the transform.

What does ADEPT Suite do?

ADEPT Suite converts a data stream into one or many different data streams. It supports XML, AFPDS, Mixed mode AFP, IBM 3800-1, IBM 1403/3211 line data, Metacode, DJDE, ASCII line data, Postscript, PDF and PCL. For a complete matrix of supported inputs and outputs please go to http://www.s4ssl.co.uk/products/adept_suite_data_transform_formats.html or see the chart at the end of this document.

Why should you consider this software over competitors and other document composition output drivers?

1. All job setup actions are within an intuitive GUI.
2. Drag and drop creation of conversion or extractions rules. No scripting required so the software can be used by more businesses focussed staff members with some IT knowledge.
3. Automatic job setup and configuration.
4. Visually faithful page viewing system.
5. Create very small PDF file sizes using font mapping, typically a quarter of the size of a rendered PDF file. Very important for any archival and retrieval requirements.
6. Automatic font mapping for AFP and Xerox fonts as well as a GUI for easy customised font mapping. No scripting of text file manipulation.
7. High speed production engine.
8. Low license cost. Purchase a perpetual license or pay as you go.
9. Windows GUI job creation. Batch engine runs on Windows, Linux, Solaris and AIX.
10. Simple setup for XML, CSV or indices (e.g. TLE's) extraction with many clever and very useful data manipulation options.
11. Don't pay for data stream drivers and features you will never use. Purchase exactly what you require.
12. Full API set allowing other applications to call ADEPT Suite as part of their processes.
13. Suppress pages during the parsing process such as banner pages.
14. Create multiple outputs from a single input file. E.g. a separate index file with a PDF for archiving.
15. Thousands of users worldwide.
16. Online updates.

Once an ADEPT Suite job has been configured and tested, high speed multi platform transforms can be rapidly deployed to convert and extract large volumes of data.

Data Stream Conversion Matrix

INPUT	OUTPUT									
	HTML	PDF	XML	PCL 5C	PostScript™	Text	TIFF	IBM AFPDS	Xerox Metacode	
IBM Printer Systems										
• AFPDS	✓	✓	✓	✓	✓	✓	✓	✓	✓
